

Less electricity is more

new sustainable low rise
high density housing

12 apartments per unit, no
electricity, no running water.

Have you given much thought to life without enough electricity? What is life like during a blackout/brownout? We know our utility bills will “necessarily skyrocket” because Obama told us. One of the ways we will “sustain” the future is by using less today. The goal of those pushing “**sustainability**” is to convince coerce people into using less of everything.

EPA mandates forcing coal fired power plants to close “helps” you to use less electricity thereby you become more “sustainable”.
